BOOK REVIEWS

Clinical Guidelines for Occupational Health Nurses, 2nd ed.

by L.N. Ray and L.K. Glazner (Eds). Arizona: Sundance Press, 1991.

These guidelines form a manual for the practice of occupational health nurses at the worksite. The manual would be useful for the beginning occupational health nurse in establishing clinical care and program guidelines in an occupational health clinic. (Examples of program topics: Preplacement Screening, Lead Surveillance and Hearing Conservation.) However, some of the clinical problems discussed are directed at nurse practitioners doing primary care under protocol in the occupational setting.

The manual is professionally written and well organized and is divided into sections: general issues, clinical problems, procedures and programs. It includes examples of forms which may be used. The clinical problems are discussed in a SOAP format (subjective, objective, assessment, and plan) which makes them concise and easy to follow.

This manual covers its intended topics thoroughly; however, the following topics are not included and the reviewer recommends they be considered for the third edition: a general overview of workers' compensation from its clinical perspective, basic ergonomics, the Americans With Disabilities Act, and the Bloodborne Pathogens Standard.

Copies can be purchased from: California State AOHN, c/o Kimm Wolber, 3125 19th St., Ste. 186, Bakersfield, CA 93301.
